cary make your own CONSTELLATION viewer

You will need:

- a cardboard tube
- paper muffin liners
- rubber band
- star maps & info cards (included in this PDF)
- a toothpick, pin, or paperclip
- glue stick
- scissors
- black paper (optional)
- star stickers (optional)

- Decorate a cardboard tube however you want (we wrapped it in black paper around a cardboard tube and stuck on star stickers).
- Cut out the 9 constellation maps and glue each one inside a muffin tin liner.
- Use a toothpick or paperclip to poke through the "stars" for each constellation. A pin or thumbtack also work. Ask an adult if you need help.

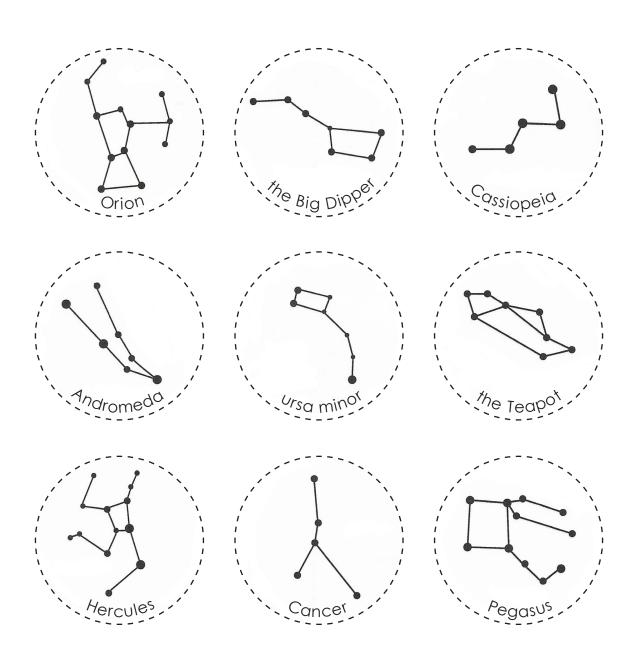

- Place a constellation over the end of your tube. Secure it with a rubber band.
- Look through the open end of your viewer to see a constellation!

Change the muffin paper to see a different group of stars.

Practice identifying the different constellations and you'll be ready to find them in the night sky!

CONSTELLATION MAPS

(cut out and glue inside paper muffin liners)

"the hunter"

Northern Hemisphere: November - February
